

H.R. 8462, the National Quantum Initiative Reauthorization Act

Allison Schwartz, Senior Vice President of Global Government Relations and Public Affairs, D-Wave

“We’re encouraged by the movement of NQI reauthorization by the House Science Committee. The committee strikes the right balance between advancing quantum computing hardware and expanding government programs that include near-term applications to support innovative quantum-powered solutions. We look forward to working with Congress as this bill moves through the legislative process.”
