

H.R. 8462, the National Quantum Initiative Reauthorization Act

Hartmut Neven, Founder and Lead, Google Quantum AI:

“Google thanks Congressmen Weber, Obernolte, and Babin for introducing the National Quantum Initiative (NQI) Reauthorization Act. This Act is crucial to ensuring the United States’ continued leadership in quantum technologies, and builds on vital federal R&D and workforce investments made through the 2018 NQI. By adding provisions on applied research, supply chains, and workforce development, this updated Act reflects advances toward commercialization from Google Quantum AI and others in the U.S. quantum industry. We look forward to continuing to partner with NQI programs and activities, and to the economic and national security benefits of quantum computing and other quantum technologies.”
