

**AMENDMENT IN THE NATURE OF A SUBSTITUTE**  
**TO H.R. 1735**  
**OFFERED BY Mr. Baird**

Strike all after the enacting clause and insert the following:

1 **SECTION 1. SHORT TITLE.**

2       This Act may be cited as the “Mathematical and Sta-  
3       tistical Modeling Education Act”.

4 **SEC. 2. MATHEMATICAL AND STATISTICAL MODELING EDU-  
5       CATION.**

6       (a) FINDINGS.—Congress finds the following:

7           (1) The mathematics taught in schools, includ-  
8       ing statistical problem solving and data science, is  
9       not keeping pace with the rapidly evolving needs of  
10       the public and private sector, resulting in a STEM  
11       skills shortage and employers needing to expend re-  
12       sources to train and upskill employees.

13           (2) According to the Bureau of Labor Statis-  
14       tics, the United States will need 1,000,000 addi-  
15       tional STEM professionals than it is on track to  
16       produce in the coming decade.

17           (3) The field of data science, which is relevant  
18       in almost every workplace, relies on the ability to

1 work in teams and use computational tools to do  
2 mathematical and statistical problem solving.

3 (4) Many STEM occupations offer higher  
4 wages, more opportunities for advancement, and a  
5 higher degree of job security than non-STEM jobs.

6 (5) The STEM workforce relies on computa-  
7 tional and data-driven discovery, decision making,  
8 and predictions, from models that often must quan-  
9 tify uncertainty, as in weather predictions, spread of  
10 disease, or financial forecasting.

11 (6) Most fields, including analytics, science, eco-  
12 nomics, publishing, marketing, actuarial science, op-  
13 erations research, engineering, and medicine, require  
14 data savvy, including the ability to select reliable  
15 sources of data, identify and remove errors in data,  
16 recognize and quantify uncertainty in data, visualize  
17 and analyze data, and use data to develop under-  
18 standing or make predictions.

19 (7) Rapidly emerging fields, such as artificial  
20 intelligence, machine learning, quantum computing  
21 and quantum information, all rely on mathematical  
22 and statistical concepts, which are critical to prove  
23 under what circumstances an algorithm or experi-  
24 ment will work and when it will fail.

1           (8) Military academies have a long tradition in  
2           teaching mathematical modeling and would benefit  
3           from the ability to recruit students with this exper-  
4           tise from their other school experiences.

5           (9) Mathematical modeling has been a strong  
6           educational priority globally, especially in China,  
7           where participation in United States mathematical  
8           modeling challenges in high school and higher edu-  
9           cation is orders of magnitude higher than in the  
10          United States, and Chinese teams are taking a ma-  
11          jority of the prizes.

12          (10) Girls participate in mathematical modeling  
13          challenges at all levels at similar levels as boys, while  
14          in traditional mathematical competitions girls par-  
15          ticipate less and drop out at every stage. Students  
16          cite opportunity for teamwork, using mathematics  
17          and statistics in meaningful contexts, ability to use  
18          computation, and emphasis on communication as  
19          reasons for continued participation in modeling chal-  
20          lenges.

21          (b) DEFINITIONS.—In this section:

22               (1) DIRECTOR.—The term “Director” means  
23               the Director of the National Science Foundation.

24               (2) FEDERAL LABORATORY.—The term “Fed-  
25               eral laboratory” has the meaning given such term in

1 section 4 of the Stevenson-Wydler Technology Inno-  
2 vation Act of 1980 (15 U.S.C. 3703).

3 (3) FOUNDATION.—The term “Foundation”  
4 means the National Science Foundation.

5 (4) INSTITUTION OF HIGHER EDUCATION.—The  
6 term “institution of higher education” has the  
7 meaning given such term in section 101(a) of the  
8 Higher Education Act of 1965 (20 U.S.C. 1001(a)).

9 (5) MATHEMATICAL MODELING.—The term  
10 “mathematical modeling” has the meaning given the  
11 term in the 2019 Guidelines to Assessment and In-  
12 struction in Mathematical Modeling Education  
13 (GAIMME) report, 2nd edition.

14 (6) OPERATIONS RESEARCH.—The term “oper-  
15 ations research” means the application of scientific  
16 methods to the management and administration of  
17 organized military, governmental, commercial, and  
18 industrial processes to maximize operational effi-  
19 ciency.

20 (7) STATISTICAL MODELING.—The term “sta-  
21 tistical modeling” has the meaning given the term in  
22 the 2021 Guidelines to Assessment and Instruction  
23 in Statistical Education (GAISE II) report.

24 (8) STEM.—The term “STEM” means the aca-  
25 demic and professional disciplines of science, tech-

1 nology, engineering, and mathematics, including  
2 computer science.

3 (c) PREPARING EDUCATORS TO ENGAGE STUDENTS  
4 IN MATHEMATICAL AND STATISTICAL MODELING.—The  
5 Director shall make awards on a merit-reviewed, competi-  
6 tive basis to institutions of higher education, and nonprofit  
7 organizations (or a consortium thereof) for research and  
8 development to advance innovative approaches to support  
9 and sustain high-quality mathematical modeling education  
10 in schools operated by local educational agencies, including  
11 statistical modeling, data science, operations research, and  
12 computational thinking. The Director shall encourage ap-  
13 plicants to form partnerships to address critical transi-  
14 tions, such as middle school to high school, high school  
15 to college, and school to internships and jobs.

16 (d) APPLICATION.—An entity seeking an award  
17 under subsection (c) shall submit an application at such  
18 time, in such manner, and containing such information as  
19 the Director may require. The application shall include the  
20 following:

21 (1) A description of the target population to be  
22 served by the research activity for which such an  
23 award is sought, including student subgroups de-  
24 scribed in section 1111(b)(2)(B)(xi) of the Elemen-  
25 tary and Secondary Education Act of 1965 (20

1 U.S.C. 6311(b)(2)(B)(xi)), and students experi-  
2 encing homelessness and children and youth in fos-  
3 ter care.

4 (2) A description of the process for recruitment  
5 and selection of students, educators, or local edu-  
6 cational agencies to participate in such research ac-  
7 tivity.

8 (3) A description of how such research activity  
9 may inform efforts to promote the engagement and  
10 achievement of students in prekindergarten through  
11 grade 12 in mathematical modeling and statistical  
12 modeling using problem-based learning with contex-  
13 tualized data and computational tools.

14 (4) In the case of a proposal consisting of a  
15 partnership or partnerships with 1 or more local  
16 educational agencies and 1 or more researchers, a  
17 plan for establishing a sustained partnership that is  
18 jointly developed and managed, draws from the ca-  
19 pacities of each partner, and is mutually beneficial.

20 (e) PARTNERSHIPS.—In making awards under sub-  
21 section (c), the Director shall encourage applications that  
22 include—

23 (1) partnership with a nonprofit organization or  
24 an institution of higher education that has extensive  
25 experience and expertise in increasing the participa-

1 tion of students in prekindergarten through grade  
2 12 in mathematical modeling and statistical mod-  
3 eling;

4 (2) partnership with a local educational agency,  
5 a consortium of local educational agencies, or Tribal  
6 educational agencies;

7 (3) an assurance from school leaders to making  
8 reforms and activities proposed by the applicant a  
9 priority;

10 (4) ways to address critical transitions, such as  
11 middle school to high school, high school to college,  
12 and school to internships and jobs;

13 (5) input from education researchers and cog-  
14 nitive scientists, as well as practitioners in research  
15 and industry, so that what is being taught is up-to-  
16 date in terms of content and pedagogy;

17 (6) a communications strategy for early con-  
18 versations with parents, school leaders, school  
19 boards, community members, employers, and other  
20 stakeholders; and

21 (7) resources for parents, school leaders, school  
22 boards, community members, and other stakeholders  
23 to build skills in modeling and analytics.

24 (f) USE OF FUNDS.—An entity that receives an  
25 award under this section shall use the award for research

1 and development activities to advance innovative ap-  
2 proaches to support and sustain high-quality mathe-  
3 matical modeling education in public schools, including  
4 statistical modeling, data science, operations research, and  
5 computational thinking, which may include—

6 (1) engaging prekindergarten through grade 12  
7 educators in professional learning opportunities to  
8 enhance mathematical modeling and statistical prob-  
9 lem solving knowledge, and developing training and  
10 best practices to provide more interdisciplinary  
11 learning opportunities;

12 (2) conducting research on curricula and teach-  
13 ing practices that empower students to choose the  
14 mathematical, statistical, computational, and techno-  
15 logical tools that they will apply to a problem, as is  
16 required in life and the workplace, rather than pre-  
17 scribing a particular approach or method;

18 (3) providing students with opportunities to ex-  
19 plore and analyze real data sets from contexts that  
20 are meaningful to the students, which may include—

21 (A) missing or incorrect values;

22 (B) quantities of data that require choice  
23 and use of appropriate technology;

1 (C) multiple data sets that require choices  
2 about which data are relevant to the current  
3 problem; and

4 (D) data of various types including quan-  
5 tities, words, and images;

6 (4) taking a school or district-wide approach to  
7 professional development in mathematical modeling  
8 and statistical modeling;

9 (5) engaging rural local agencies;

10 (6) supporting research on effective mathe-  
11 matical modeling and statistical modeling teaching  
12 practices, including problem- and project-based  
13 learning, universal design for accessibility, and ru-  
14 brics and mastery-based grading practices to assess  
15 student performance;

16 (7) designing and developing pre-service and in-  
17 service training resources to assist educators in  
18 adopting transdisciplinary teaching practices within  
19 mathematics and statistics courses;

20 (8) coordinating with local partners to adapt  
21 mathematics and statistics teaching practices to le-  
22 verage local natural, business, industry, and commu-  
23 nity assets in order to support community-based  
24 learning;

1           (9) providing hands-on training and research  
2 opportunities for mathematics and statistics edu-  
3 cators at Federal laboratories, institutions of higher  
4 education, or in industry;

5           (10) developing mechanisms for partnerships  
6 between educators and employers to help educators  
7 and students make connections between their mathe-  
8 matics and statistics projects and topics of relevance  
9 in today's world;

10          (11) designing and implementing professional  
11 development courses and experiences, including men-  
12 toring for educators, that combine face-to-face and  
13 online experiences;

14          (12) addressing critical transitions, such as  
15 middle school to high school, high school to college,  
16 and school to internships and jobs; and

17          (13) any other activity the Director determines  
18 will accomplish the goals of this section.

19       (g) EVALUATIONS.—All proposals for awards under  
20 this section shall include an evaluation plan that includes  
21 the use of outcome oriented measures to assess the impact  
22 and efficacy of the award. Each recipient of an award  
23 under this section shall include results from these evalua-  
24 tive activities in annual and final projects.

25       (h) ACCOUNTABILITY AND DISSEMINATION.—

1           (1) EVALUATION REQUIRED.—The Director  
2 shall evaluate the portfolio of awards made under  
3 this section. Such evaluation shall—

4           (A) use a common set of benchmarks and  
5 tools to assess the results of research conducted  
6 under such awards and identify best practices;  
7 and

8           (B) to the extent practicable, integrate the  
9 findings of research resulting from the activities  
10 funded through such awards with the findings  
11 of other research on student's pursuit of de-  
12 grees or careers in STEM.

13          (2) REPORT ON EVALUATIONS.—Not later than  
14 180 days after the completion of the evaluation  
15 under paragraph (1), the Director shall submit to  
16 Congress and make widely available to the public a  
17 report that includes—

18           (A) the results of the evaluation; and

19           (B) any recommendations for administra-  
20 tive and legislative action that could optimize  
21 the effectiveness of the awards made under this  
22 section.

23          (i) FUNDING.—From amounts appropriated or other-  
24 wise made available for the Directorate for STEM Edu-  
25 cation of the National Science Foundation, the Director

1 shall allocate up to \$10,000,000 for each of fiscal years  
2 2024 through 2028 to carry out this section.

3 **SEC. 3. NASEM REPORT ON MATHEMATICAL AND STATIS-**  
4 **TICAL MODELING EDUCATION IN PRE-**  
5 **KINDERGARTEN THROUGH 12TH GRADE.**

6 (a) STUDY.—Not later than 60 days after the date  
7 of enactment of this Act, the Director shall seek to enter  
8 into an agreement with the National Academies of  
9 Sciences, Engineering and Medicine (in this section re-  
10 ferred to as “NASEM”) (or if NASEM declines to enter  
11 into such an agreement, another appropriate entity) under  
12 which NASEM, or such other appropriate entity, agrees  
13 to conduct a study on the following:

14 (1) Factors that enhance or barriers to the im-  
15 plementation of mathematical modeling and statis-  
16 tical modeling in elementary and secondary edu-  
17 cation, including opportunities for and barriers to  
18 use modeling to integrate mathematical and statis-  
19 tical ideas across the curriculum, including the fol-  
20 lowing:

21 (A) Pathways in mathematical modeling  
22 and statistical problem solving from kinder-  
23 garten to the workplace so that students are  
24 able to identify opportunities to use their school  
25 mathematics and statistics in a variety of jobs

1 and life situations and so that employers can  
2 benefit from students' school learning of data  
3 science, computational thinking, mathematics,  
4 statistics, and related subjects.

5 (B) The role of community-based prob-  
6 lems, service-based learning, and internships for  
7 connecting students with career preparatory ex-  
8 periences.

9 (C) Best practices in problem-, project-,  
10 performance-based learning and assessment.

11 (2) Characteristics of teacher education pro-  
12 grams that successfully prepare teachers to engage  
13 students in mathematical modeling and statistical  
14 modeling, as well as gaps and suggestions for build-  
15 ing capacity in the pre-service and in-service teacher  
16 workforce.

17 (3) Mechanisms for communication with stake-  
18 holders, including parents, administrators, and the  
19 public, to promote understanding and knowledge of  
20 the value of mathematical modeling and statistical  
21 modeling in education.

22 (b) PUBLIC STAKEHOLDER MEETING.—In the course  
23 of completing the study described in subsection (a),  
24 NASEM or such other appropriate entity shall hold not

1 less than one public meeting to obtain stakeholder input  
2 on the topics of such study.

3 (c) REPORT.—The agreement under subsection (a)  
4 shall require NASEM, or such other appropriate entity,  
5 not later than 24 months after the effective date of such  
6 agreement, to submit to the Secretary of Education and  
7 the appropriate committees of jurisdiction of Congress a  
8 report containing—

9 (1) the results of the study conducted under  
10 subsection (a);

11 (2) recommendations to modernize the proc-  
12 esses described in subsection (a)(1); and

13 (3) recommendations for such legislative and  
14 administrative action as NASEM, or such other ap-  
15 propriate entity, determines appropriate.

16 (d) FUNDING.—From amounts appropriated or oth-  
17 erwise made available for the Directorate for STEM Edu-  
18 cation of the National Science Foundation, the Director  
19 shall allocate up to \$1,000,000 for fiscal year 2024 to  
20 carry out this section.

21 **SEC. 4. LIMITATIONS.**

22 (a) LIMITATION ON FUNDING.—Amounts made avail-  
23 able to carry out sections 2 and 3 shall be derived from  
24 amounts appropriated or otherwise made available to the  
25 National Science Foundation.

1 (b) SUNSET.—The authority to provide awards under  
2 this Act shall expire on September 30, 2028.
