

H.R. 9497, AI Advancement and Reliability Act

"The bipartisan AI Advancement and Reliability Act is an important step forward for the sector, effectively balancing support for innovation with managing potential AI risk. We believe that the inclusive standards-setting process and increased focus on real-world harm will make a positive difference in the deployment of AI technology. As a security and privacy-first enterprise AI company, we believe this legislation is crucial for building trust and accelerating responsible technology adoption. We thank Representatives Obernolte, Lieu, Lucas, and Lofgren for their leadership and are committed to collaborating with Congress to advance these goals."

- **A.J. Bhadelia, Head of North America Government Affairs and Public Policy, Cohere**
