Center for Data Innovation Applauds Introduction of National Quantum Initiative Reauthorization Act

WASHINGTON— The Center for Data Innovation today welcomed the U.S. House National Quantum Initiative Reauthorization Act. The Center issued the following statement from its senior policy analyst, Hodan Omaar:

The National Quantum Initiative Act (NQIA) reauthorization bill illustrates how policy can support technology leadership. While we wring our hands about artificial intelligence, it is good to know that pragmatism and technology promotion is the order of the day when it comes to quantum information science.

Now, while this is an excellent—and necessary—first step, it is time for the Senate to prioritize the swift passage and enactment of the NQIA reauthorization bill to further catalyze innovation and propel the nation into the forefront of the technological landscape.

For more on this issue, see:

- Hodan Omaar, "[The U.S. Approach to Quantum Policy](#)" (Center for Data Innovation, 2023)

The Center for Data Innovation studies the intersection of data, technology, and public policy and formulates and promotes pragmatic public policies designed to maximize the benefits of data-driven innovation in the public and private sectors. It educates policymakers and the public about the opportunities and challenges associated with data, as well as technology trends such as open data, artificial intelligence, and the Internet of Things. The Center is part of the Information Technology and Innovation Foundation (ITIF), a nonprofit, nonpartisan think tank. For more about the Center, visit datainnovation.org.
