

## **H.R. 9497, AI Advancement and Reliability Act**

"Maintaining U.S. leadership in AI means more than just having the most powerful models or largest AI sector. We need durable institutions capable of advancing our collective understanding of how to make AI safe and resilient based on sound science. The AI Advancement and Reliability Act will strengthen these institutions in the U.S. government. SeedAI commends Representatives Obernolte, Lieu, Lucas, and Lofgren for their leadership on this issue."

**- Austin Carson, Founder and CEO, SeedAI**
