

H.R. 9497, AI Advancement and Reliability Act

"Americans for Responsible Innovation (ARI) is pleased to support the AI Advancement and Reliability Act of 2024. By establishing a Center for AI Advancement and Reliability within the National Institute of Standards and Technology, this proposal will help promote the development of standards and best practices to ensure AI systems' reliability while protecting the public from harm. We believe this legislation will strengthen U.S. leadership in AI research and development while building public trust in AI, and we commend Reps. Obernolte, Lieu, Lucas, and Lofgren for their leadership on this important issue."
